Featuring San Francisco native plants  
propagated from local sources

**Experts in native gardening** will be on hand to  
answer questions. Natives **conserve water** and  
attract **birds, bees, butterflies, and other wildlife.**

“**San Francisco native**” means natives propagated from plant populations in  
San Francisco and northern San Mateo County. Local plant populations are  
naturally adapted to the unique climate of our area - and planting local natives  
helps maintain the integrity of this unique gene pool.
